SUMMARY

Computer Science (Cybersecurity) graduate, April 2026, looking for a Software Development Engineer role. I have built backend and full-stack features in Java, Spring Boot, React and Node.js across two internships, and I have solved 700+ data structures and algorithms problems. I am comfortable taking a feature from the requirement through to release.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, SQL
- **Backend:** Spring Boot, Node.js, Express.js, REST APIs
- **Frontend:** React, HTML, CSS
- **Databases:** MySQL, MongoDB, Supabase
- **Tools:** Git, GitHub, VS Code, Postman, Linux, Burp Suite
- **Core:** Data Structures & Algorithms, OOP, DBMS, Computer Networks, Operating Systems

EXPERIENCE

IBaseIT

Mar 2025 – Sep 2025

Penetration Testing Intern

Hyderabad, India

- Tested two enterprise web applications end to end and wrote 50+ test cases myself, since there was no existing checklist to work from. Found 10+ access-control defects before release.
- Checked how the applications behaved for three different user levels by changing session tokens and request values, which turned up broken access control, session hijacking and SQL injection issues.
- Worked with the developers over two sprints to confirm each fix, which brought failed re-tests down by 20%.

SkillDzire

Jan 2024 – Apr 2024

Full Stack Developer Intern

Remote

- Built 3+ REST APIs in Java and Spring Boot during two-week Agile sprints, and brought API response time down by 30% after finding and rewriting the slow parts.
- Rewrote MySQL queries using multi-table joins and added indexes where they were missing, cutting data retrieval time by 25%.
- Shipped every feature I was given with no critical defects at release, using input validation and code review.

PROJECTS

Gesture Math Solver — real-time computer vision desktop application

Python, OpenCV, MediaPipe, NumPy

- Built a calculator you control with hand gestures on a webcam. It reads 21 points on the hand to work out digits and operators, and runs at 30 FPS.
- Split a 149-line script into 16 modules with type hints and wrote 17 unit tests. Replaced unsafe `eval()` with an AST whitelist so the app cannot run injected code.

AI Interview Platform — full-stack MERN application

React, Node.js, Express, MongoDB

- Built an interview preparation app with three user types (Admin, Recruiter, Candidate) from one codebase, using JWT login and bcrypt hashed passwords.
- Connected an LLM API to generate interview questions and read free-text answers, and added a code editor in the browser for technical practice.

AgriCare — deep learning image classification system

Python, TensorFlow, CNN, Streamlit

- Trained an EfficientNet CNN with transfer learning to spot rice leaf diseases at 98% accuracy, and added Grad-CAM images so a user can see why the model made each call.

LostNFound — campus lost-and-found web platform

PHP, MySQL, JavaScript, Bootstrap

- Built an item reporting site with user login and an admin dashboard, on a normalised MySQL schema with indexed multi-table joins so search stays fast as records grow.

EDUCATION

Shri Vishnu Engineering College for Women (SVECW)

Oct 2022 – Apr 2026

B.Tech, Computer Science and Engineering (Cybersecurity); CGPA: 8.85/10

Bhimavaram, India

ACHIEVEMENTS AND CERTIFICATIONS

- 700+ DSA problems solved on LeetCode, HackerRank and CodeChef; HackerRank Problem Solving Silver Badge. Finalist, PRAJWALAN 2K24 National Hackathon.
- Certifications: Google Cybersecurity Professional; IBM Cybersecurity Analyst Professional; Oracle SQL; Google Generative AI; Fortinet Network Security.
